

I claim:

1. A device for receiving pre-selected information from a website via the internet, the device comprising;
 - a display;
 - a speaker;
 - a connection from said device to the internet;
 - a timer device for activating downloading of preselected information from the website through said connection, and for activating the presentation of the preselected information on said device.
2. The device of claim 1 where said device includes one or more buttons for tagging content items that are being presented on said device.
3. The device of claim 1 where said website includes an internet searching feature for providing content options for said device.
4. A system for presenting preselected content comprising;
 - a display;
 - a website with an internet connection for preselecting content to be automatically sent to said display;
 - a connection means between the website and said display for the purpose of sending said preselected content to said display.
5. The device of claim 4 where said device includes one or more buttons for tagging content items that are being presented on said device.
6. A system for providing information to an end user comprising;

a device,
a personal computer
a communication link between the internet and the personal computer,
a communication system between the personal computer and the device,
a website for preselecting content that is to be downloaded and stored at the
personal computer, wherein the personal computer subsequently sends preselected
information via the communication system to the device where the preselected
information is presented to the end user.
